

# Governance Intelligence

*Evidence-first GDPR and EU AI Act analysis - from documentation gaps to prioritized, traceable action.*

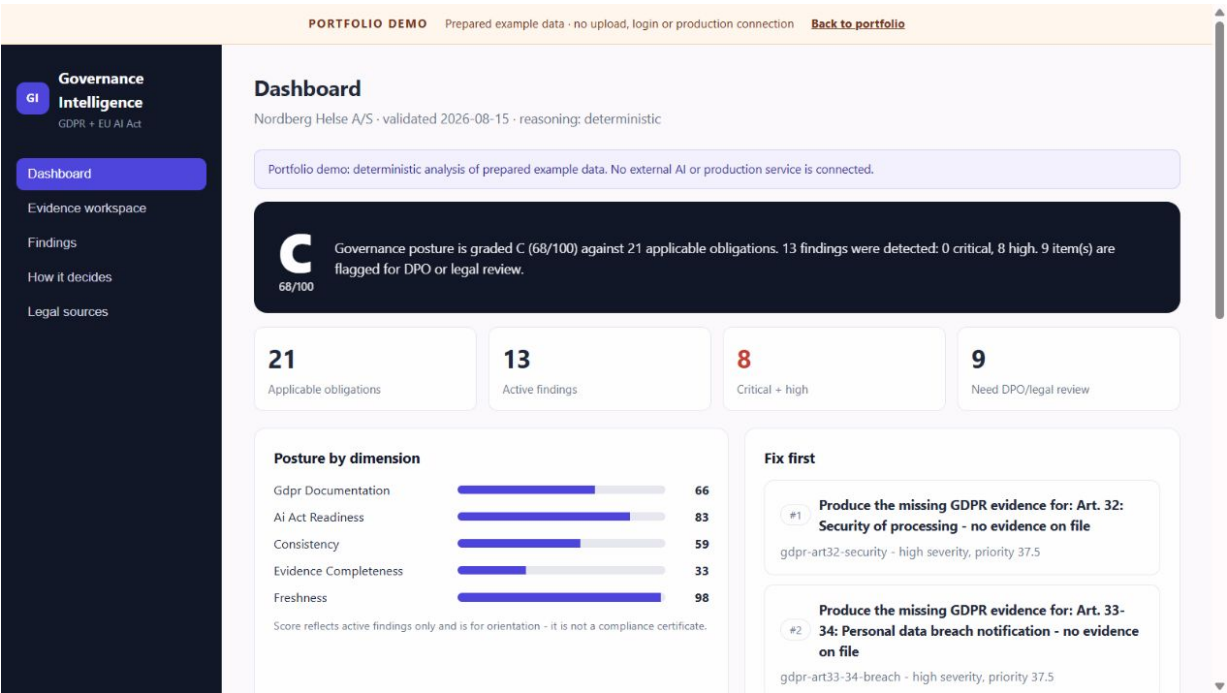

## The product

Governance Intelligence turns an organisation profile and its governance evidence into a structured view of applicable obligations, missing evidence, inconsistencies and priority actions. It does not certify compliance and it does not replace a DPO or lawyer.

# A workflow built for defensible decisions

The interface keeps scope, evidence, confidence and legal escalation visible instead of hiding uncertainty behind a single compliance score.

|                                                                                                                      |                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>1. Derive scope</b><br>The organisation profile determines which GDPR and AI Act obligations apply.               | <b>2. Map evidence</b><br>Prepared documents are classified and matched to obligation-level expectations.          |
| <b>3. Explain findings</b><br>Every finding carries severity, confidence, evidence, source and concrete remediation. | <b>4. Track change</b><br>Disposition and revalidation show what is new, persistent, resolved or accepted as risk. |

# A complete standalone analysis product

*The portfolio version uses fictional, prepared evidence. Upload, login and production connections are deliberately disabled while the real analysis, prioritization and report engines remain demonstrable.*

## Core capabilities

- Deterministic obligation engine covering GDPR and EU AI Act requirements
- Evidence extraction with grounded spans and source citations
- Consistency, freshness, risk and remediation analysis
- Five-dimensional governance posture with explicit limitations
- Finding dispositions and revalidation delta
- Board-ready HTML report and offline legal-source update check

## What the case demonstrates

### Product strategy

A clear distinction between governance workspace, analytical intelligence and professional legal review.

### Trustworthy AI design

Confidence, evidence, legal status and escalation remain visible throughout the decision flow.

### Full-stack engineering

A dependency-free Node.js service, local persistence, testable engines, responsive SPA and generated reports.

#### PORTFOLIO DEMO

Fictional organisation and documents. No production data, external AI call or customer upload.
